

Integrated Design

BOWERBIRD DESIGN COLLECTIVE
BOWERBIRDDDESIGNS.COM

The design challenge was to help a leading technology company prepare for growth by increasing space and incorporating elements of their unique brand style. Bowerbird Design worked in collaboration with Mark Mueller Architects in a three-year effort to design a state-of-the-art, 95,000-square-foot campus that can accommodate up to 750 employees. With collaboration and flexibility at the forefront of the project goals, the new campus was integrated with a wide variety of conference rooms, demo rooms, lounge spaces, and phone rooms, along with a large centrally located cafe, an auditorium, training rooms, a fitness center, and access to trails for outdoor activities.

To serve Tyler Technologies' valued customers (more than 14,000 government offices and schools), Bowerbird designed a client lab that houses interactive touch-display monitors in the walls, which allows the company to demonstrate and showcase their software capabilities to new and perspective clients. DNA light fixtures cascade across the ceiling and down the walls. The cafe features unique lighting and textural elements, and is designed for connection and respite. With picnic-style tables and benches, fun-patterned carpeting, and five-foot George Nelson pendants, the space is made to bring people together.

Tyler Technologies' Yarmouth campus is characterized by complex aesthetics featuring rich woods, textural finishes, and a color palette of blue and green, as well as a holistic-minded approach with sustainability. The addition harnesses the character of the original building by tying its rich history into modern interiors. The project received MEREDA's Top 10 Notable Project Award in 2017.
